Chess App Allows Man To Waste Time On Phone But In Smart Way	Describing how the phone game had succeeded where others had failed, local man Peter Bolton told reporters Friday that the app Chess Ace allowed him to waste time on his phone but in a smart way. "It's great, because instead of opening up some dumb app like Clash of Clans, I now have a higher-brow option when it comes to putting off work, zoning out on the subway, or just killing a couple of hours in the evenings before bed," said Bolton, explaining that he loved how using the application to learn the intricacies of chess let him fritter away the precious, irreplaceable moments of his infinite existence in a slightly brainer manner. "I used to feel self-conscious when coworkers saw me playing Candy Crush Saga. But when they see me loading up a round of chess, they know I'm a guy who has taste and sophistication when it comes to his choice of fundamentally worthless pursuits. That's always nice." At press time, sources confirmed Bolton was promoted on the spot after his boss saw him putting his computer opponent's piece in check during a morning meeting.
Chess Opponent	Questioning whether the other player had misrepresented his skill level, local man Victor Luongo told reporters Tuesday he was starting to suspect his chess opponent with all queens was hustling him. "He insisted when we were laying down money on this game that he wasn't very good, but we're only a dozen moves in, and his 16 queens have already taken a bunch of my pieces," said Luongo, who sat across from his adversary at an outdoor table in Washington Square Park, adding that he began to suspect something was fishy when he noticed his side of the board didn't have a queen or any bishops. "I used an Italian opening, which I figured would put me in an easy position to defeat a player as bad as this guy was making himself out to be. Then the guy moved his queen to a position where I was easily able to take it with my knight, and I admit I started feeling kind of sorry for him. But soon he took my knight with another queen, and then he took my other knight with a third queen. After that, he put me in check with a fourth queen, and all of a sudden he had the advantage. I know in chess one player has all the queens, but it's pretty frustrating to think that he's taking me for a ride." At press time, Luongo reportedly realized he wasn't being hustled after all when he checkmated his opponent.
Chess App Allows Man To Waste Time On Phone But In Smart Way	Describing how the phone game had succeeded where others had failed, local man Peter Bolton told reporters Friday that the app Chess Ace allowed him to waste time on his phone but in a smart way. "It's great, because instead of opening up some dumb app like Clash Of Clans, I now have a higher-brow option when it comes to putting off work, zoning out on the subway, or just killing a couple of hours in the evenings before bed," said Bolton, explaining that he loved how

	using the application to learn the intricacies of chess let him fritter away the precious, irreplaceable moments of his finite existence in a slightly brainier manner. "I used to feel self-conscious when coworkers saw me playing Candy Crush Saga. But when they see me loading up a round of chess, they know I'm a guy who has taste and sophistication when it comes to his choice of fundamentally worthless pursuits. That's always nice." At press time, sources confirmed Bolton was promoted on the spot after his boss saw him putting his computer opponent's piece in check during a morning meeting.
Cellphones Turn 50 Pt. 1	On April 3, 1973, Martin Cooper placed a call on a handheld, portable phone. Cooper was an engineer with Motorola. It is a telecommunications company. He called his rival at another telecommunications company, AT&T. He wanted to tell him that Motorola had just created the first cellphone. The phone weighed almost 2 1/2 pounds. It was as big as a brick. But this was only the beginning. Cooper's cellphone needed a 10-hour charge for a 30-minute call. People had to wait 10 years to buy one. In 1983, the phone cost \$3,995, equal to \$12,000 in today's money.
Cellphones Turn 50 Pt. 2	In 1992, the computer company IBM began selling a new kind of cellphone. It could do things much like a computer. It was called a smartphone. More changes followed. In 2007, the computer company Apple showed everyone its first iPhone. It had a touch screen. This new phone was like a handheld computer. By 2023, more than 8 out of 10 Americans owns a smartphone. Most people in the world own one.
Cellphones Turn 50 Pt. 3	What is the future of the cellphone? Brian David Johnson teaches about the future and inventions. He does this at Arizona State University. He says cellphones are going to keep getting smaller. They will get easier to use. Johnson says cellphones could show up in eyeglasses. They could end up in virtual reality (VR) headsets. But do cellphones make our lives better? It depends on whom you ask. In some countries, they give people more access to jobs and schools. Phones make paying bills easier. Life without a cellphone is hard to imagine, says Joanne Orlando. She is an expert in digital well-being. She interviews adults and teens about their technology habits. Orlando says that the device is both a blessing and a curse. "It's not an object that we own anymore," Orlando says. "It's become part of who we are now. It's like having another arm." However, people can overdo a good thing. Are you making the phone work for you? Orlando asks. Or are you pouring your time into the phone?
The Crow	Awestruck as they watched the creature scarf down the grease-stained paper product, visitors at Grand Canyon National Park were reportedly treated to the majestic sight of a crow eating a napkin Tuesday. "Shh, kids, quiet. We don't want to scare him off," said tourist Pierre Boulard, who took his phone out of his pocket ever so carefully so as not to disturb the animal feasting on the remnants of a bag of Wendy's strewn across the parking lot. "Wow, nature is truly incredible. It must know that the napkin touched a burger at one point. Now Edie, go stand over there by your brother so I can take your picture." At press time, Grand Canyon National Park reported that several visitors had been mauled by the crow.
SAT Prep Tips	Here are some tips for acing the SAT and getting into the college of your dreams: The SAT is hours long and requires intense concentration, so try not to have been exposed to smartphones, television, or advertising at any point prior to the test. Time management is important as you move through the test. Take a minute to read over the question, take several additional minutes to panic, and then take another couple minutes to kick yourself for not doing any prep classes, while being sure to leave yourself enough time to fill in a convincing-looking pattern of bubbles. If you find yourself stuck on a particular question, work through it by making a list of successful people who never went to college and unsuccessful people who did. Test writers are absolutely crazy about the letter B, so if you're uncertain, go with B for sure. Or C. Read over the prompts carefully. Some SAT questions are intentionally misleading in order to draw your attention away from the flaws of an American education system disproportionately focused on standardized testing.

Lesson name	Data
	The answer to number 16 is 0.725. Try your very best and you should be find. Remember, your SAT score doesn't determine the rest of your life...that's a credit score you're thinking of.
Wordle	Wordle is the internet's new sensation. But why are people so obsessed with it? The Onion answers your burning questions about Wordle. Q: How does it work? A: Once a day, there's a word puzzle, and you have six guesses to figure out why this is fun. Q: What are some of its unique features? A: Players can post results on social media to let people know they did pretty much as well as everyone else. Q: Two Z's in one five-letter word? Are you kidding me? A: We know, that one was ridiculous. Q: Why is it so addicting? A: It taps into users' need for a pathetic little sense of accomplishment. Q: Does it cost money to play? A: While Wordle has no upfront costs, eventually, everyone pays. Q: Is "splen" a word? A: No. Q: Is it full of obnoxious popup ads? A: Give it time. Q: I guessed the word! Now what do I do? A: Tell the world, child! The people have been waiting years for this joyous news!
Wrong Amount of Water	A new global report released Monday by the U.S. Geological Survey revealed that every place on earth currently has the wrong amount of water. "New satellite data confirms that every corner of the earth has the incorrect quantity of water," the report read in part, noting that even though the total amount of water on the planet seemed to be about right, give or take a few hundred millimeters, the distribution of that water across the globe was "way off." "In every case, there is either too much or too little water, with zero exceptions. Even when we try to move it around ourselves to make it even, someone keeps moving it back. It's very frustrating." The USGS did, however, note that the amount of water on earth had been properly distributed.
Lack of Meat In Shopping Cart	His eyes widening as he realized there was neither a roast nor tenderloin in sight, local husband Eric Mavis reportedly expressed concern Monday over the lack of meat in his family's shopping cart. "Wait, what are we going to eat this week?" said Mavis, who frowned as he looked down at the contents of the cart that, with the exception of a 1-pound package of ground turkey, contained nothing but an abundance of fresh vegetables, fruit, dairy products, legumes, bread, eggs, nuts, and canned goods. "Something doesn't look right. Is there a flank steak hiding somewhere at the bottom? Are we doing takeout all week or something? Why are there so many mushrooms in here? Hey, what's going on?" At press time, reports confirmed Mavis had rushed back to meet his wife at the checkout lane with a salami under each arm.
Disappointed Man Reaches Bottom of Ice Cream Carton Right When H	Kicking himself for not buying more than a single pint, local man Billy Crenshaw was reportedly disappointed Monday that he had reached the bottom of the ice cream carton right when he was hitting his stride. "Oh man, I was in the zone!" said Crenshaw, adding that he had just started feeling "good and loose" when he consumed the final bites of the mint and green-flavored frozen dessert. "I wasn't sure if I was even hungry when I started. Those first couple of bites, I'm not going to lie, they were a little cold. Honestly, I didn't even start enjoying the ice cream until halfway through. But once I hit that first big chocolate chunk, it was game time. It's a pity it's over." At press time, sources confirmed Crenshaw had decided he shouldn't waste his momentum and began eating the carton.
Parachute	Stressing that he did not need to put up with that kind of attitude, a local skydiving instructor reported Monday that he was not going to open the parachute until you changed your tone. "To be honest, I feel like I deserve more respect than what you're giving me right now, especially when you're the one asking me for a favor," midair parachute operator Chip Lorenz said in a polite but firm voice, explaining that your screams were not only unnecessary, but also highly inconsiderate. "I hear what you're saying, and I can see this is very important to you. While the concern and anxiety you're experiencing right now are totally valid, that doesn't mean you're allowed to take those feelings out on me. You're doing a lot of yelling as we plummet toward the ground, but nowhere in all those shouts have I heard the word 'please.' Now I'm going to need an apology, or we're just

Lesson name	Data
	going to continue our current free fall at approximately 120 miles per hour." At press time, source confirmed Lorenz had sighed and opened the parachute after deciding "Please, please, please, I don't want to die, don't let me die, please!" was the best he was going to get.
Finance Whiz	A monetary wunderkind who has amassed a level of wealth the average American can only dream of, local finance whiz Jason Reed has over \$300 in his bank account, sources confirmed Monday. "That's not just \$300 on paper. That's 300 bucks, free and clear, in a checking account at Chase," said a person close to Reed, speculating that the 24-year-old-money-making phenom must possess an extensive knowledge of financial markets and a preternatural ability to navigate macroeconomic trends in order to possess hundreds of dollars in liquid assets. "Don't ask me how he's managed to accumulate that kind of dough, but he must have made some seriously shrewd deals and then taken advantage of a bunch of tax loopholes. I was at his house once, and he actually just had money lying around, including at least \$24 worth of quarters in what I can only assume was some kind of high-yield coin jar." At press time, Reed had reportedly lost everything he had after sinking all his money into a new set of tires when his car failed inspection.
Emergency Slide	Given little choice but to deploy the safety measure, stranded NASA astronauts were forced to take an emergency slide back to earth, sources confirmed Friday. "After realizing that a mechanical failure had made it impossible to return to Earth in the Orion spacecraft, we released the 286-mile inflatable slide stored by the emergency exits," said mission leader Ray Harmon, telling reporters that the assembled crew had lined up in an orderly fashion while holding their flotation devices in case they were sucked into the vacuum of space. "Fortunately we have protocols in place for this type of eventuality, and everything should go smoothly and comfortably for the passengers apart from a potential fall of a few dozen vertical miles if the slide lets out over a chasm or canyon." At press time, Harmon confirmed that the ride down the slide had actually been kind of fun apart from burning up upon entry into the Earth's atmosphere.
Wisdom Teeth Part 1	Having wisdom teeth removed is a common procedure for people in their late teens and early 20s. Wisdom teeth are the last adult teeth to come into the mouth. But why don't they come in during childhood with the rest of our permanent teeth? The answer comes down to how we develop as children. There's just not enough room in a child's jaw for wisdom teeth to come in. But as a child grows, their jaw grows, too. It's only when we're older that there is more room for wisdom teeth to emerge, according to research published in a scientific journal in October 2021. However, many modern human jaws don't grow long enough for wisdom teeth to come in without problems. This is why wisdom teeth removal today is so common.
Cheating on the Chess Board	There were plenty of reasons to be suspicious of Arcangelo Ricciardi. There was the way he kept his thumb tucked into his armpit throughout several rounds of chess and his refusal to get up from his seat after hours of competition. There was also the fact that Ricciardi, a chess player ranked number 51,366 in the world, had speedily dispatched several superior opponents during one of Italy's most prestigious tournaments. In the end, his eyes gave him away. The 37-year-old was "batting his eyelids in the most unnatural way," referee Jean Coqueraut told the Italian newspaper La Stampa. Perhaps that explained the mid-caliber player's strange success at the Imperia Chess Festival, which featured several masters and grandmasters. Coqueraut said he then figured out that Ricciardi was blinking in Morse code, according to Chess.com. After refusing to remove his shirt when confronted by the referee, Ricciardi was sent through a metal detector. Hanging beneath his shirt, the detector found a pendant containing a tiny video camera connected to a small box underneath his armpit. It is believed Ricciardi was using the video camera to transmit his games to a helper or a computer program. He then received signals for suggested moves via tiny beeps sent to the armpit box, according to the Telegraph. Ricciardi said that the pendant and box were good-luck charms. "It's only envy," he told La Stampa. "I always knew my potential,

Lesson name	Data
	but I was never able to express it." Ricciardi said yoga and "self-training" helped him to play better. The player was expelled from the tournament. The Italian Chess Federation is mulling charges of sports fraud. Coquerat told the Guardian that he thinks Ricciardi was testing the cheating system for another player. The Imperia festival's prize of 1,000 euros (\$1,117) seems a poor reward for risking a career, he said. As the Guardian's Stephen Moss, who has written extensively about the chess world, pointed out, there seems to be more and more cheating. Computers are now capable of beating even the best players, and there are a million ways a crafty cheat can turn that to his or her advantage. In April, the 25-year-old grandmaster and Georgian chess champion Gaoz Nigalidze was disqualified from the Dubai Open when officials found an iPhone with an open chess application hidden in a bathroom stall. Nigalidze's opponent had become suspicious when the young player kept getting up to go to the bathroom after every move. Four years earlier, one of the world's top players was suspended from the French Chess Federation. An official had found out that the player was being sent suggestions from a computer program via text message. In chess, using a computer is like taking steroids in sports. Some say it's even worse. Performance enhancing drugs boost a body that is already there; the athlete still has to do the mental and physical work of playing the game. An online chess program means it does not matter who the player is. "It would be like an amateur baseball player putting on a bionic suit to hit the ball 500 feet out and hitting a home run every time," Tony Rich, the chief official for the U.S. Chess Championship, told NPR in April. According to mathematician Claude Shannon, the number of possible ways for a chess game to play out is somewhere in the region of 1 with 120 zeroes after it. There are more possible combinations of moves in any chess game than there are bacterial cells on Earth. Even computers, with their high processing speeds and unrestricted access to data, are outmatched by the sheer possibilities. Shannon writes that it would take a standard machine longer than the age of the universe just to analyze all the possible outcomes of its first move. Computers do have a better shot. In 1997, an IBM supercomputer named Deep Blue became the first program to beat a reigning world champion in a match under standard time controls. Since then, computers have only gotten smarter. The standard iPhone is now capable of the feat that Deep Blue performed less than two decades ago. According to The Wall Street Journal, experts believe the current best chess computer programs would be rated between 3200 and 3300 on the scale used to measure chess performance. Magnus Carlsen, the world's top living chess player, is rated 2862. "The basic problem is that it's incredibly easy to cheat with a phone," English chess grandmaster Nigel Short, who once was ranked third in the world and is now 60th, told The Washington Post after Nigalidze, the Georgia grandmaster, was caught cheating. "You can have some application running on your phone, and it's quite easy to conceal ... My dog could win a major tournament using one of these devices. Or my grandmother. Anybody could do this." If anybody with a phone can win a chess tournament, then nobody is going to bother, chess fans worry. They believe the best way to keep the game competitive is to keep iPhones and hidden cameras, and Morse code messaging boxes out of it. But, as Rich pointed out, that is no easy task. "You know, if we asked players to take their shoes off and strip-searched them before every game, I doubt you'll find many people who'd want to come out to the chess tournament," he told NPR.
Wisdom Teeth Part 2	Ancient humans ate tough foods. Their diets were full of hard nuts, uncooked vegetables, and chewy meat. People ate what they could hunt or gather. Eating and chewing these types of tough foods as a youngster actually makes the jaw grow longer, said Julia Boughner. She's an anthropologist at the University of Saskatchewan College of Medicine in Canada. Anthropologists are scientists who study humans, including their characteristics, behaviors, and cultures, in the past and present. These days, for many people, diet and food preparation is much different than it was even 150 years ago. We've shifted to eating food that is softer and mushier and much easier to chew. This means that humans have shorter jaws than ancient humans did.

Lesson name	Data
Wisdom Teeth Part 3	Another reason wisdom teeth come in during young adulthood instead of childhood is that they're not needed until then. Wisdom teeth are our third set of molars. These are the flat teeth at the rear of the mouth. Molars are for crushing and grinding food. Ancient people would grind down or lose their molars to tough food. Wisdom teeth would take the place of these lost teeth. "They're meant as kind of a backup for somebody who may have lost another molar tooth," said Steven Kupferman. He's an oral surgeon at Cedars-Sinai Medical Center in Los Angeles, California. Because most people don't lose their molars as young children, wisdom teeth wait until adulthood to arrive. In other words, if you lost your molars or ground them down as a child or teenager, your wisdom teeth are there to fill the gap.
Wisdom Teeth Part 4	Children start losing their baby teeth around 6 years of age. This is when the first set of permanent molars grows in. Around age 12, the second set of molars emerges, serving as a backup to the 6-year molars in case they develop cavities, said Kupferman. A cavity is a hole inside teeth caused by teeth decaying or breaking down. Third molars, or wisdom teeth, come in around the ages of 17 to 21. Dentists today often remove wisdom teeth because the teeth can cause pain in crowded mouths. Even if a person doesn't have pain, removing wisdom teeth in young adulthood may prevent health issues like gum infections later. An infection is an invasion or growth of germs (like bacteria and viruses) in the body. Gum infections can lead to tooth loss and other health complications. Dentists and oral surgeons generally don't remove wisdom teeth as a preventive measure past age 27. But they will remove the teeth if pain or other issues come up. Most people have 32 teeth as adults, including four wisdom teeth. But some have more or fewer, and some people may be missing their wisdom teeth altogether, Kupferman said. And not everyone gets their wisdom teeth removed. Even today, when people have teeth pulled for braces, they often will keep their wisdom teeth because there's enough room for them, Kupferman said.
Wisdom Teeth Part 5	Not everyone gets their wisdom teeth removed, though. Even today, when people have teeth pulled for braces, they often will keep their wisdom teeth because there's enough room for them, Kupferman said. Some people claim surgeons are just trying to make money by taking out wisdom teeth, Kupferman said. But if you know any teenagers and you've seen just a few X-rays, you know that there's reason to remove third molars, he said.
Hamburger Buns	Breathing a huge sigh of relief when they saw the two halves, a spokesperson for the U.S. populace announced Tuesday that the nation likes it when the hamburger bun is already cut. "Oh thank God-that would have been exhausting," said 43-year-old Zachary Bernard, who spoke on behalf of all 335 million Americans, expressing gratitude that the pre-cut buns had allowed them to park themselves in front of the TV that much quicker. "If it wasn't cut, we don't even know what we'd do. We'd have to turn around and get a butter knife, and by the time we were done, we'd probably be too tired to eat the burger. We'd just go to sleep right there in the kitchen." At press time, Bernard added that using a cut bun was also half the cost compared to using two buns to make a burger.
Dog Allowed to Eat Whatever He Wants off the Sidewalk on His Bir	Receiving the go-ahead from his typically strict owner, local terrier-beagle mix Montgomery Pickles, 7, was reportedly allowed to eat whatever he wanted from the sidewalk Tuesday since it was his birthday. "Go for it! I'm not going to keep you away from any trash today, my little birthday boy," pet owner Joe Barron said as he used the edge of his boot to hold a styrofoam container of discarded chicken wing bones open for the dog to gobble up, avoiding their usual leash tug-of-war over the choking hazards. "No rules today, buddy! You find it, you can it it. Fritos bag? Sounds good to me. Flattened, rotting rat carcass? I don't find that appetizing myself, but I'm not going to judge. Whatever you decide to do with that pile of vomit is totally up to you on your special day. I'll just look away until you decide you're done." At press time, sources confirmed Barron and Pickles were continuing the celebrations late into the night in the veterinary emergency room.

Whatever you decide to do with that pile of vomit is totally up to you on your special day. I'll just look away until you decide you're done." At press time, sources confirmed Barron and Pickles were continuing the celebrations late into the night in the veterinary emergency room.
Skydiver	Despite her attendance throughout the morning's mandatory training course, sources confirmed Wednesday that an amateur skydiver ascending up into the clouds had clearly not listened to instructions. "It doesn't matter how many times I say it, there's one in every damn group who fails to pay attention to the single most important thing I tell them," said local skydiving instructor Marnie Jacobs, who shook her head as first-time solo jumper Alice Kempton leapt from the plane over the drop zone and immediately shot upwards, getting smaller and smaller as she rose into the stratosphere. "They assume they know everything and it's just as easy as jumping out of a plane, but look at her-she doesn't even know which direction to go! This is why we make these idiots sign a liability waiver." At press time, reports confirmed Kempton had pulled her parachute as she left Earth's atmosphere.

Essay for College: Part 2	At its heart, the personal statement tells a story about why you're ready to commit to a course. According to Ray Powell, an admissions tutor at Greenwich University, \"you've got to choose the degree program that you're interested in because if you don't, it's going to be a long, hard three years. If people have thought it through I would expect to see that in the personal statement.\" How to show it: Write about why the course excites you and where that interest comes from. It could be an experience you've had, or a difference you'd like to make in the future. Powell suggests using \"I want to study this subject because...\" as a prompt and going from there.
Questions to Ask: Part 3	Before you start going on your college tours, sit down with your counselors/Individualized Education Program (IEP) team/Teacher for the Visually Impaired (TVI)/family and have a conversation about your needs. What do you anticipate your accommodation needs will be by the time you get to college? Considerations may include additional time for training in O&M, Independent Living, and Assistive Technology – in order to be ready to manage and juggle the complex demands of college. Also, consider the increased independence assumed once you graduate from high school. Make a list of the types of accommodations that you plan to request in the college setting. It can help to look at the accommodations you receive on your IEP, 504 Plan, or academic plan and identify what those accommodations might look like in the college setting. It's important to note, though, that these accommodations may not directly transfer over to college. Also, remember that colleges do not provide “services” such as a paraprofessional or TVI.
New Dog Breeds	The American Kennel Club (AKC) keeps records of dog breeds. A purebred dog has parents and ancestors of the same kind. The AKC recognized 197 breeds. Now, it is adding two more. They are the mudi and the Russian toy. The mudi is said like \"moody.\" It is a farm dog from Hungary, a country in Europe. These dogs are medium-sized. Their fur is shaggy. They work hard. They can herd sheep. They can hunt boar. They can also catch rats. Kim Seiter is a dog trainer. She lives in New Jersey. It is easy to train a mudi, she says. They do not like to sit around. The Russian toy came from English terriers. Rich people in Russia loved them. The dogs are tiny. They have long legs. They are have a lot of energy. But they can be shy around people they don't know. Gina DiNardo is with the AKC. The Russian toy loves to be close to its humans, she says. Its owner should spend a lot

Lesson name	Data
	of time with it. The AKC has rules for breeds. There must be at least 300 dogs. They must be spread around at least 20 states. They should look similar. They should act in similar ways. Not all dogs are recognized by the AKC. The Labradoodle is an example. It is a cross between a Labrador retriever and a poodle. Many people own Labradoodles. Maybe one day it will be recognized by the AKC. Some animal rights supporters do not like the selling of purebreds. They say people should adopt dogs from shelters instead. The AKC does not agree. Purebreds act a certain way. That helps people find the right dog for them.
Holidays	It is 2021! Time to celebrate. There are many surprising, silly holidays this year. We picked one for each month. Use this list to have a fun year! You may learn something new along the way. National Puzzle Day - January 29 Puzzles are a fun way to pass the time. On National Puzzle Day, do a puzzle! Try a tricky jigsaw puzzle. Or test yourself with a word puzzle. Random Acts of Kindness Day - February 17 Have you ever done a nice thing for someone you do not know? This has a name. It is called a random act of kindness. It is random because you did not plan it. You just made a choice to be kind. On February 17, do it again! Do a kind thing for someone else. It will make you both happy. National Scribble Day - March 27 Is a scribble art? Diane Alber thinks so. She is a writer. She came up with the idea for National Scribble Day. She wanted to show kids that even a doodle can be a work of art. National Library Workers Day - April 6 Library workers work very hard. They help us find wonderful books. They teach us many other things, too. On this day, say thank you to a library worker. Tell them what you are reading! National Astronaut Day - May 5 Alan Shepard was an astronaut. He went into space on May 5, 1961. He was the first American in space! On this day, learn one fun astronaut fact. Share it with a friend. World Giraffe Day - June 21 Giraffes are special animals. They are not doing so well in the wild. Many are dying out. Use this day to learn about giraffes. Help protect them in the wild. I Forgot Day - July 2 Are you forgetful? If so, June 2 is the day for you. Make a list of things you wanted to do, but forgot. Then try to get them done! DOGust First - August 1 A shelter is a safe place for animals. People can adopt dogs from shelters. You may not know the real birthday of an adopted pup. So you can celebrate on August 1. It is the birthday for all shelter dogs. Give your pup extra love on this day. World Rivers Day - September 26 Rivers are important. Many animals live in rivers. Lots of plants do, too. So it is important to keep the waters clean. On World Rivers Day, learn what you can do to protect the rivers of the world. World Vegetarian Day - October 1 Vegetarians are people who do not eat meat. If you are not a vegetarian, act like one on October 1! Skip eating meat on this day. There are many meatless meals to try. Take a Hike Day - November 17 Fall is a great time to hike. The American Hiking Society is a hiking group. Visit its website for hiking tips. Then go take a hike. National Cocoa Day - December 13 Cocoa is a very old treat. People in South America made it long, long ago. The drink they made was not very sweet. On December 13, have a cup of cocoa. You can make it sweet if you like. Marshmallows help with that!
SAT Prep Tips	Here are some tips for acing the SAT and getting into the college of your dreams: The SAT is hours long and requires intense concentration, so try not to have been exposed to smartphones, television, or advertising at any point prior to the test. Time management is important as you move through the test. Take a minute to read over the question, take several additional minutes to panic, and then take another couple minutes to kick yourself for not doing any prep classes, while being sure to leave yourself enough time to fill in a convincing-looking pattern of bubbles. If you find yourself stuck on a particular question, work through it by making a list of successful people who never went to college and unsuccessful people who did. Test writers are absolutely crazy about the letter B, so if you're uncertain, go with B for sure. Or C. Read over the prompts carefully. Some SAT questions are intentionally misleading in order to draw your attention away from the flaws of an American education system disproportionately focused on standardized testing. The answer to number 16 is 0.725. Try your very best and you should be find. Remember, your SAT score doesn't determine the rest of your life...that's a credit score you're thinking of.

Lesson name	Data
Cellphones Turn 50 Pt. 1	On April 3, 1973, Martin Cooper placed a call on a handheld, portable phone. Cooper was an engineer with Motorola. It is a telecommunications company. He called his rival at another telecommunications company, AT&T. He wanted to tell him that Motorola had just created the first cellphone. The phone weighed almost 2 1/2 pounds. It was as big as a brick. But this was only the beginning. Cooper's cellphone needed a 10-hour charge for a 30-minute call. People had to wait 10 years to buy one. In 1983, the phone cost \$3,995, equal to \$12,000 in today's money.
Cellphones Turn 50 Pt. 2	In 1992, the computer company IBM began selling a new kind of cellphone. It could do things much like a computer. It was called a smartphone. More changes followed. In 2007, the computer company Apple showed everyone its first iPhone. It had a touch screen. This new phone was like a handheld computer. By 2023, more than 8 out of 10 Americans owns a smartphone. Most people in the world own one.
Cellphones Turn 50 Pt. 3	What is the future of the cellphone? Brian David Johnson teaches about the future and inventions. He does this at Arizona State University. He says cellphones are going to keep getting smaller. They will get easier to use. Johnson says cellphones could show up in eyeglasses. They could end up in virtual reality (VR) headsets. But do cellphones make our lives better? It depends on whom you ask. In some countries, they give people more access to jobs and schools. Phones make paying bills easier. Life without a cellphone is hard to imagine, says Joanne Orlando. She is an expert in digital well-being. She interviews adults and teens about their technology habits. Orlando says that the device is both a blessing and a curse. "It's not an object that we own anymore," Orlando says. "It's become part of who we are now. It's like having another arm." However, people can overdo a good thing. Are you making the phone work for you? Orlando asks. Or are you pouring your time into the phone?
Arts and Literary Magazine Pt. 3	Kahani is reaching more people, she said. The more that happens, the more youth experience art. They interact with art in a place where art therapy can help them. "Sridevi is always the first to help another student," said Joyce Symoniak. She teaches art at Illinois Math and Science Academy. That's Sridevi's high school. "She puts her ideas into action and always in a positive manner." Sridevi plans to work on Kahani for as long as possible. She said the health of kids is what really matters to her.
Arts and Literary Magazine Pt. 2	Sridevi is trying to send Kahani to more places. Kahani comes out twice a year. It is usually 20 pages. It includes poetry, short stories, paintings, and photography. It was made to spread happiness. Kahani was formed during the coronavirus outbreak. Sridevi knew several people who had become sick. Some were family. They had to go to nearby children's hospitals. She said those events inspired her to create some sort of creative arts therapy. She wanted the magazine to be made by students for students. She pointed out that there are not many things "made by students for this hospital population." A team of six people work on Kahani. The team includes her family, friends, and her high school classmates. Sridevi talks about the magazine to the media. She also works as a designer, artist, and writer for the magazine. She spends most of her school breaks working on Kahani. In the future, she said she wants patients to submit their own art to the magazine.
Arts and Literary Magazine Pt. 1	A teenager in Illinois is using art to energize other young people. Her name is Sridevi Krothapalli and she is 17 years old. Sridevi first started watercolor painting as a young child. Later, she picked up digital art and drawing. In 2020, she used her love for art to create Kahani. It's a student-led nonprofit group. Kahani distributes a digital arts and literature magazine to children's hospitals. It is designed for patients from kindergarten to middle school. Kahani means storytelling in Hindi. That's a language from India. Young patients at several hospitals can now access Kahani. They read the magazine on digital devices, like tablets. Hospital televisions even show it.
Essay for College: Part 4	If you have work or voluntary experience, show how they intersect with your

Lesson name	Data
	course or life goals. Reference hobbies, sports, community and clubs, too. Will Jones, student recruitment manager at Teesside University, says universities understand COVID has disrupted many activities and opportunities. They'll be interested instead to see how you've adapted. How to show it: "There are a lot of things you can do at home and online to show that you are passionate about your course and that you're doing your research about the industry and university," Jones says. You can draw on books, blogs, videos, online courses, remote events and even discussions you've had. Remember to show why these matter to you and your course.
The Crow	Awestruck as they watched the creature scarf down the grease-stained paper product, visitors at Grand Canyon National Park were reportedly treated to the majestic sight of a crow eating a napkin Tuesday. "Shh, kids, quiet. We don't want to scare him off," said tourist Pierre Boulard, who took his phone out of his pocket ever so carefully so as not to disturb the animal feasting on the remnants of a bag of Wendy's strewn across the parking lot. "Wow, nature is truly incredible. It must know that the napkin touched a burger at one point. Now Edie, go stand over there by your brother so I can take your picture." At press time, Grand Canyon National Park reported that several visitors had been mauled by the crow.
Questions to Ask: Part 5	Consider your specific needs and ask questions that will help you understand what the college will and will not provide. When the meeting is over, sit down and capture the information via notes so you can compare the answers that each college provides. This will help inform your college planning and application process. Additionally, having these conversations with the DSO early on can help you decide which schools to apply to and which schools will be a good fit.
Wrong Amount of Water	A new global report released Monday by the U.S. Geological Survey revealed that every place on earth currently has the wrong amount of water. "New satellite data confirms that every corner of the earth has the incorrect quantity of water," the report read in part, noting that even though the total amount of water on the planet seemed to be about right, give or take a few hundred millimeters, the distribution of that water across the globe was "way off." "In every case, there is either too much or too little water, with zero exceptions. Even when we try to move it around ourselves to make it even, someone keeps moving it back. It's very frustrating." The USGS did, however, note that the amount of fire on earth had been properly distributed.
Questions to Ask: Part 5	Consider your specific needs and ask questions that will help you understand what the college will and will not provide. When the meeting is over, sit down and capture the information via notes so you can compare the answers that each college provides. This will help inform your college planning and application process. Additionally, having these conversations with the DSO early on can help you decide which schools to apply to and which schools will be a good fit.
Finance Whiz	A monetary wunderkind who has amassed a level of wealth the average American can only dream of, local finance whiz Jason Reed has over \$300 in his bank account, sources confirmed Monday. "That's not just \$300 on paper. That's 300 bucks, free and clear, in a checking account at Chase," said a person close to Reed, speculating that the 24-year-old-money-making phenom must possess an extensive knowledge of financial markets and a preternatural ability to navigate macroeconomic trends in order to possess hundreds of dollars in liquid assets. "Don't ask me how he's managed to accumulate that kind of dough, but he must have made some seriously shrewd deals and then taken advantage of a bunch of tax loopholes. I was at his house once, and he actually just had money lying around, including at least \$24 worth of quarters in what I can only assume was some kind of high-yield coin jar." At press time, Reed had reportedly lost everything he had after sinking all his money into a new set of tires when his car failed inspection.

At press time, Reed had reportedly lost everything he had after sinking all his money into a new set of tires when his car failed inspection.
Essay for College: Part 3	Most undergraduate courses won't expect specific experience or knowledge. Instead, admissions staff are looking to see how you'll adapt and contribute to the course. Wilkinson adds: "A lot of courses don't require you to have a huge amount of academic knowledge in advance – we teach you that. But we haven't got time to teach you that plus how to work nicely with a group." How to show it: Use course descriptions to identify relevant soft skills – they're things like communication, leadership or time management. Then find examples and evidence for each from your previous studies, part-time work or hobbies. Don't take a scattergun approach, though – be selective. Rosalyn Dobrzanski, head of admissions at the University of Nottingham, says that for each skill, "write how this will help you on the course and even in your future career."
Disappointed Man Reaches Bottom of Ice Cream Carton Right When H	Kicking himself for not buying more than a single pint, local man Billy Crenshaw was reportedly disappointed Monday that he had reached the bottom of the ice cream carton right when he was hitting his stride. "Oh man, I was in the zone!" said Crenshaw, adding that he had just started feeling "good and loose" when he consumed the final bites of the mint and green-flavored frozen dessert. "I wasn't sure if I was even hungry when I started. Those first couple of bites, I'm not going to lie, they were a little cold. Honestly, I didn't even start enjoying the ice cream until halfway through. But once I hit that first big chocolate chunk, it was game time. It's a pity it's over." At press time, sources confirmed Crenshaw had decided he shouldn't waste his momentum and began eating the carton.
Questions to Ask: Part 1	Students who are blind and visually impaired have more considerations to take into account when they are exploring colleges. It's time to really practice your self-advocacy skills as you prepare for the next, big step after high school. Colleges offer varying types of accommodations, and the way in which accommodations are administered can be very different from school to school. It's essential that you are asking the right questions to be able to inform your college search and selection process. College students with disabilities should connect with the college's Disability Services Office (DSO). The DSO is the office on campus tasked with providing reasonable accommodations and access for students with disabilities. It will be important for you to understand your vision and how it impacts your learning. You will need to be able to describe your needs to the DSO and ask questions that help you learn the types of accommodations that they may provide. Let's explore what that looks like.
Questions to Ask: Part 4	Prior to going on a college tour, contact the DSO and request a meeting. Typically, you can find the DSO's contact information on their website. Go to the college's main homepage and type "disability services" into the search box. That should take you to the DSO page. Let them know when you are visiting campus and arrange a time during your visit to speak with them. It may help to inform them that you are blind or visually impaired. Some colleges will even have a specific DSO counselor who supports students with vision loss. Here are some examples of questions that you may want to ask the DSO: Do you have/have you had any students who are blind or visually impaired? If the answer is "yes," ask them if they are able to reach out to the students to see if they would be willing to talk to a prospective student about their experience on campus. What is the process for

Lesson name	Data
	requesting accommodations and what type of documentation do you require? I understand that colleges are required to provide course materials in accessible formats such as braille and/or accessible electronic documents. How does that process work? Do you provide any orientation and mobility training for students? Note: colleges are not obligated to provide O&M training. Do you provide any assistive technology software? Do you also provide training on how to use the assistive technology if the student does not know how to use it? Note: colleges are not obligated to provide assistive technology training. Check out this Technology Competencies Checklist to see where your skills rank in terms of college readiness. Can you tell me how the testing accommodation process works? Is there a private testing room for me to use a computer and screen reading software or screen magnification? Can you tell me about the housing accommodations process? What other types of academic supports are available for students? Note: Colleges often have academic support services such as a writing center, a math assistance center, and tutoring services. For these services, you have to be able to identify on your own when you need help and go and seek it out. Some colleges also offer academic support services such as one-on-one coaching or workshops on skills like time management and study skills.
Questions to Ask: Part 1	Students who are blind and visually impaired have more considerations to take into account when they are exploring colleges. It's time to really practice your self-advocacy skills as you prepare for the next, big step after high school. Colleges offer varying types of accommodations, and the way in which accommodations are administered can be very different from school to school. It's essential that you are asking the right questions to be able to inform your college search and selection process. College students with disabilities should connect with the college's Disability Services Office (DSO). The DSO is the office on campus tasked with providing reasonable accommodations and access for students with disabilities. It will be important for you to understand your vision and how it impacts your learning. You will need to be able to describe your needs to the DSO and ask questions that help you learn the types of accommodations that they may provide. Let's explore what that looks like.
Emergency Slide	Given little choice but to deploy the safety measure, stranded NASA astronauts were forced to take an emergency slide back to earth, sources confirmed Friday. "After realizing that a mechanical failure had made it impossible to return to Earth in the Orion spacecraft, we released the 286-mile inflatable slide stored by the emergency exits," said mission leader Ray Harmon, telling reporters that the assembled crew had lined up in an orderly fashion while holding their flotation devices in case they were sucked into the vacuum of space. "Fortunately we have protocols in place for this type of eventuality, and everything should go smoothly and comfortably for the passengers apart from a potential fall of a few dozen vertical miles if the slide lets out over a chasm or canyon." At press time, Harmon confirmed that the ride down the slide had actually been kind of fun apart from burning up upon entry into the Earth's atmosphere.
Questions to Ask: Part 2	Every college has a DSO or an administrator who is tasked with providing "reasonable accommodations" for qualified students with disabilities. The name of this office varies from college to college. Here are some examples from colleges and universities around the US: Disability Support Services, Student Accessibility Office, Student Access and Support Services. We will refer generically to all of these offices as a "DSO." Prospective students can contact the DSO to ask questions about the types of accommodations they provide and the process for requesting accommodations. It's important to note that the Admissions Office for any college or university and the DSO on the same campus are not the same entity nor are the offices connected. In other words, your disclosure of a disability to the DSO will not impact any admissions decision. Many high school students begin their college search process during their sophomore and junior year. This is a great time to start identifying the colleges that you are interested in and start planning to go on college tours. In addition to touring the physical campus and learning more about the college and its culture, students should reach out to the

Lesson name	Data
	DSO and set up a time to meet with a staff member. You can prepare for a conversation with the DSO by having a list of questions and potential accommodations written down prior to meeting with the DSO counselor. It's important to note that accommodations apply to nearly every aspect of college life.
Questions to Ask: Part 3	Before you start going on your college tours, sit down with your counselors/Individualized Education Program (IEP) team/Teacher for the Visually Impaired (TVI)/family and have a conversation about your needs. What do you anticipate your accommodation needs will be by the time you get to college? Considerations may include additional time for training in O&M, Independent Living, and Assistive Technology – in order to be ready to manage and juggle the complex demands of college. Also, consider the increased independence assumed once you graduate from high school. Make a list of the types of accommodations that you plan to request in the college setting. It can help to look at the accommodations you receive on your IEP, 504 Plan, or academic plan and identify what those accommodations might look like in the college setting. It's important to note, though, that these accommodations may not directly transfer over to college. Also, remember that colleges do not provide “services” such as a paraprofessional or TVI.
Essay for College: Part 1	Perhaps the hardest part of the college application is the personal statement, where students are expected to sum up their entire identity within 4,000 characters and no more than 47 lines. So how important is the personal statement? "It's a really useful document in terms of determining which students we want to join our academic cohort each year," says Kirsty Wilkinson, school and college liaison manager at Loughborough University. After predicted grades or practical work, the personal statement is your best shot at showing why you want and deserve a place. As such, the personal statement can feel intimidating. Here, admissions staff explain what they're looking for, and how to argue your case.
The Evolution of Drawing	Drawing is an important art. For many artists, drawing is the first thing they learn. They draw before they do anything else. Drawing is a starting point. It helps with painting, sculpture and other arts. Artists have many drawing tools. Some prefer pens. Others like pencils best. Artists can use charcoal and crayons. Chalk is good for drawing, too. Artists use different kinds of pencils. Harder pencils make cleaner lines. They are good for outlining. Softer pencils make darker marks. They are good for coloring in. Many artists today use computers to draw. They use a special program. It lets them draw with a mouse. Drawings are made up of lines. These lines sometimes form objects. They may form a picture of a person. Some artists want their drawings to look very real. They add in shadows. This can make the picture look 3-D. It looks like something in real life. People have been drawing for thousands of years. Early humans drew on cave walls. Some scribbled on rocks. Early drawings became writing. Ancient Egyptians wrote with pictures. Their writing was called hieroglyphics. Chinese writing also began as drawings. In China, artists have been drawing for 3,000 years. They drew on scrolls. These are long rolls of paper. Most Asian artists did not use pens. They used brushes. These artists drew with dark ink. About 600 years ago, drawing became important in Europe. This was during the Renaissance. It was a time of great art. An artist named Leonardo da Vinci became famous. He drew the human body. He also drew pictures of inventions. Da Vinci imagined amazing machines. Then he drew them on paper. In the 1900s, drawing changed. Artists were trying something new. Before, they had used lines to draw people and objects. So artists began making abstract drawings. These drawings did not look like anything in particular. They did not show a person. They did not show life-like objects, like a flower, either. Instead, artists drew to show their feelings. Sometimes they drew something that stood for an idea. Pablo Picasso was a Spanish artist. He made some of the greatest abstract drawings. Today, drawing is still popular. It is still an art. Yet it is used in business, too. Companies use drawings to sell products. Inventors use it to plan their work. For some, drawing is just for fun. Many kids and grown-ups like drawing.
Essay for College: Part 5	Getting into university can sometimes feel like the destination, but admissions staff

Lesson name	Data
	want to see how you'll use your degree, and to get a sense that theirs is the right course for you. Matthew Rayson is outreach officer at the University of Cumbria. He says: \"What you put in your personal statement now may not be what you want to do at the end of your degree, but it's about having that drive and that vision for the future.\" How to show it: Connect your course and interests to your career or personal goals. Rayson adds: \"Where do you see yourself after university? What is it that you want to go on to achieve?\"
Essay for College: Part 6	While there's no shortage of templates online, always write your own statement. The Universities and Colleges Admissions Service, or UCAS, is a U.K.-based organization that operates the application process for British universities. It checks submissions for similarity, so lifting sentences or ideas is a no-no. Likewise relying on someone else's input can shortchange you if you're asked to discuss your essay at the interview. If nothing else, the personal statement is a chance to check if your course and university choices are right for you — and no one else can answer that as well as you.
Questions to Ask: Part 2	Every college has a DSO or an administrator who is tasked with providing “reasonable accommodations” for qualified students with disabilities. The name of this office varies from college to college. Here are some examples from colleges and universities around the US: Disability Support Services, Student Accessibility Office, Student Access and Support Services. We will refer generically to all of these offices as a “DSO.” Prospective students can contact the DSO to ask questions about the types of accommodations they provide and the process for requesting accommodations. It's important to note that the Admissions Office for any college or university and the DSO on the same campus are not the same entity nor are the offices connected. In other words, your disclosure of a disability to the DSO will not impact any admissions decision. Many high school students begin their college search process during their sophomore and junior year. This is a great time to start identifying the colleges that you are interested in and start planning to go on college tours. In addition to touring the physical campus and learning more about the college and its culture, students should reach out to the DSO and set up a time to meet with a staff member. You can prepare for a conversation with the DSO by having a list of questions and potential accommodations written down prior to meeting with the DSO counselor. It's important to note that accommodations apply to nearly every aspect of college life.
Questions to Ask: Part 4	Prior to going on a college tour, contact the DSO and request a meeting. Typically, you can find the DSO's contact information on their website. Go to the college's main homepage and type “disability services” into the search box. That should take you to the DSO page. Let them know when you are visiting campus and arrange a time during your visit to speak with them. It may help to inform them that you are blind or visually impaired. Some colleges will even have a specific DSO counselor who supports students with vision loss. Here are some examples of questions that you may want to ask the DSO: Do you have/have you had any students who are blind or visually impaired? If the answer is “yes,” ask them if they are able to reach out to the students to see if they would be willing to talk to a prospective student about their experience on campus. What is the process for requesting accommodations and what type of documentation do you require? I understand that colleges are required to provide course materials in accessible formats such as braille and/or accessible electronic documents. How does that process work? Do you provide any orientation and mobility training for students? Note: colleges are not obligated to provide O&M training. Do you provide any assistive technology software? Do you also provide training on how to use the assistive technology if the student does not know how to use it? Note: colleges are not obligated to provide assistive technology training. Check out this Technology Competencies Checklist to see where your skills rank in terms of college readiness. Can you tell me how the testing accommodation process works? Is there a private testing room for me to use a computer and screen reading software or screen magnification? Can you tell me about the housing accommodations process? What other types of academic supports are available for students? Note:

Lesson name	Data
	Colleges often have academic support services such as a writing center, a math assistance center, and tutoring services. For these services, you have to be able to identify on your own when you need help and go and seek it out. Some colleges also offer academic support services such as one-on-one coaching or workshops on skills like time management and study skills.
Ice Cream Art Director Part 1	Lauren Kaelin is the art director at Ample Hills Creamery, an ice cream company based in Brooklyn, New York. Lauren is 29 years old. As art director, she is in charge of creating illustrations for all of Ample Hills' shops and products. This includes signs at the company's eight ice cream shops, packaging for special ice cream flavors and more. Newsela asked Lauren a few questions about her work as an art director. What do you do as art director at Ample Hills? I create all of the artwork that goes into Ample Hills' physical scoop shops. I make illustrations for pint containers, signs, murals, chalkboards and anything else that relates to Ample Hills. I'm also responsible for building all sorts of assets that help market our ice cream and brand. So that can be as far-reaching as working on a pint design that will appear in supermarkets nationwide. Or, it can be as simple as making a chalkboard that will go outside of a scoop shop. What three words best describe your job? Teamwork, creative and sweet!
Ice Cream Art Director Part 2	What led you to work at Ample Hills? I have actually worked in and around ice cream for as long as I can remember. My first job was at an ice cream parlor. I started just a little bit before my 15th birthday. My sister was the manager of an ice cream shop in my hometown in New Jersey. She hired me and I waited tables and made ice cream sundaes. I worked there all throughout high school and absolutely loved it. After I graduated from college, I started a blog with my best friend, and the blog got turned into a book. It was called "When Parents Text." With the money from that book deal I moved to Brooklyn, New York. I wanted a day job, and it just so happened that Ample Hills Creamery had opened up two blocks from my apartment. I just walked inside and asked if they were hiring and started as a scooper. How did you go from ice cream scooper to art director? Ample Hills had absolutely no signage whatsoever when I started. They did not even have a sign for used spoons on day one! So I just started drawing. When I was at college I studied art and art history. I was always interested in illustration and design. I started making illustrations, like flavor signs for example. The business was so new, I was able to have a really foundational role in creating the Ample Hills brand. The owners of Ample Hills and I later wrote an ice cream cookbook and I illustrated the whole thing. Through that process I created three characters that have become the mascots of Ample Hills: Walt, a cow; Whitty, a chicken; and Peanut Butter, a pig. He goes by P.B. for short. It's been a dream to create these three characters and have them live out little adventures in the world of ice cream. Walt is kind of gullible and will go with the flow. Whitty is more flighty and prone to exaggeration. P.B. is just constantly seeking out ice cream. In our cookbook, they go on adventures together. Now every Ample Hills shop has a big mural that features these characters. They will be prominently featured on our upcoming pint designs, too.
Ice Cream Art Director Part 3	How does your work day usually begin? My days vary. Some days I come into the "office," meaning I will actually be at one of our ice cream shops. I will do work on the floor, updating sandwich boards or talking to the staff about upcoming projects. A lot of my time in the store is spent in meetings. We talk about upcoming initiatives and special flavors we are working on. I also have studio days. On those days I will wake up, drink coffee and settle in to start drawing. Where do you do most of your drawing, and what is that workspace like? Right now, my studio space is in my apartment. I have a studio setup with a closet full of art supplies. I sit at a desk surrounded by a bunch of pictures that I like. I have 15 different kinds of pens and pencils, lots of paper, stacks of old work that I've done, and other things that I have pasted up that could give me inspiration for a new project. What do you most look forward to at the start of the day? Putting pencil to paper is a solitary experience, so something I look forward to most is the teamwork that goes into pulling off some longer-term projects at Ample Hills. I get to work with

Lesson name	Data
	managers and operations people all the time, and the camaraderie that comes with that really drives me creatively. The team can give me feedback on how successful things were in the store. That is an aspect of my job that I really enjoy.
Ice Cream Art Director Part 4	How do you feel at the end of an ordinary day at work? Do you feel energized? Do you feel exhausted? It varies so much! Some days I feel both at once. Having a creative job is a lot of fun, but it's also really challenging, because my artwork is really personal, even if I'm doing it for Star Wars or for whatever new flavor we are working on at the time. I always try to put myself into it, so it can be exhausting. But working with people and getting feedback from the customers that come in and from fans of your work can be really energizing, too. To have people come into the shop and say without any prompting that they love the artwork, that fills me with so much energy and pride. What can kids who want to take the same career path as you start doing now to prepare ? I don't think that there is just one path to do this. I certainly didn't take the usual path to do this. For kids that want to explore this type of work, I would encourage them to be creative. There are no hard and fast rules when you are making packaging or anything else. Creativity and original ideas will always rise to the top.
Questions to Ask: Part 2	Every college has a DSO or an administrator who is tasked with providing "reasonable accommodations" for qualified students with disabilities. The name of this office varies from college to college. Here are some examples from colleges and universities around the US: Disability Support Services, Student Accessibility Office, Student Access and Support Services. We will refer generically to all of these offices as a "DSO." Prospective students can contact the DSO to ask questions about the types of accommodations they provide and the process for requesting accommodations. It's important to note that the Admissions Office for any college or university and the DSO on the same campus are not the same entity nor are the offices connected. In other words, your disclosure of a disability to the DSO will not impact any admissions decision. Many high school students begin their college search process during their sophomore and junior year. This is a great time to start identifying the colleges that you are interested in and start planning to go on college tours. In addition to touring the physical campus and learning more about the college and its culture, students should reach out to the DSO and set up a time to meet with a staff member. You can prepare for a conversation with the DSO by having a list of questions and potential accommodations written down prior to meeting with the DSO counselor. It's important to note that accommodations apply to nearly every aspect of college life.
Questions to Ask: Part 3	Before you start going on your college tours, sit down with your counselors/Individualized Education Program (IEP) team/Teacher for the Visually Impaired (TVI)/family and have a conversation about your needs. What do you anticipate your accommodation needs will be by the time you get to college? Considerations may include additional time for training in O&M, Independent Living, and Assistive Technology – in order to be ready to manage and juggle the complex demands of college. Also, consider the increased independence assumed once you graduate from high school. Make a list of the types of accommodations that you plan to request in the college setting. It can help to look at the accommodations you receive on your IEP, 504 Plan, or academic plan and identify what those accommodations might look like in the college setting. It's important to note, though, that these accommodations may not directly transfer over to college. Also, remember that colleges do not provide "services" such as a paraprofessional or TVI.

	questions that you may want to ask the DSO: Do you have/have you had any students who are blind or visually impaired? If the answer is “yes,” ask them if they are able to reach out to the students to see if they would be willing to talk to a prospective student about their experience on campus. What is the process for requesting accommodations and what type of documentation do you require? I understand that colleges are required to provide course materials in accessible formats such as braille and/or accessible electronic documents. How does that process work? Do you provide any orientation and mobility training for students? Note: colleges are not obligated to provide O&M training. Do you provide any assistive technology software? Do you also provide training on how to use the assistive technology if the student does not know how to use it? Note: colleges are not obligated to provide assistive technology training. Check out this Technology Competencies Checklist to see where your skills rank in terms of college readiness. Can you tell me how the testing accommodation process works? Is there a private testing room for me to use a computer and screen reading software or screen magnification? Can you tell me about the housing accommodations process? What other types of academic supports are available for students? Note: Colleges often have academic support services such as a writing center, a math assistance center, and tutoring services. For these services, you have to be able to identify on your own when you need help and go and seek it out. Some colleges also offer academic support services such as one-on-one coaching or workshops on skills like time management and study skills.
Questions to Ask: Part 5	Consider your specific needs and ask questions that will help you understand what the college will and will not provide. When the meeting is over, sit down and capture the information via notes so you can compare the answers that each college provides. This will help inform your college planning and application process. Additionally, having these conversations with the DSO early on can help you decide which schools to apply to and which schools will be a good fit.
Surprise in the Christmas Tree	The McCormick family live in Adelaide. It is a city in South Australia. Every year they set up a Christmas tree. This year, after they put up the tree, they found a surprise. It was a wild koala! Taylah McCormick is 16 years old. She saw the koala first. The family had gone out for the day. They came home at dinner time. Taylah could tell something was different straight away. "The dog went straight to the Christmas tree and was sniffing around," Taylah said. There were Christmas decorations on the floor. Taylah named the koala Daphne. The koala was a juvenile. A baby koala is called a joey. Amanda McCormick is Taylah's mum. She thought it was a joke at first. "I thought one of my kids may have put a toy in there," Amanda said. "But no, it was a live one." The family called a koala rescue. Dee Hearne-Hellon works at the rescue. Dee said the koala likely went into the house to look around. "If they see something that they want they'll have a look." Koalas are curious animals. They like to explore. The rescue workers took Daphne to a nearby bushy area. Bushy areas have a lot of trees. Koalas like eucalyptus trees the best. They eat the eucalyptus leaves.
Parachute	Stressing that he did not need to put up with that kind of attitude, a local skydiving instructor reported Monday that he was not going to open the parachute until you changed your tone. "To be honest, I feel like I deserve more respect than what you're giving me right now, especially when you're the one asking me for a favor," midair parachute operator Chip Lorenz said in a polite but firm voice, explaining that your screams were not only unnecessary, but also highly inconsiderate. "I hear what you're saying, and I can see this is very important to you. While the concern and anxiety you're experiencing right now are totally valid, that doesn't mean you're allowed to take those feelings out on me. You're doing a lot of yelling as we plummet toward the ground, but nowhere in all those shouts have I heard the word 'please.' Now I'm going to need an apology, or we're just going to continue our current free fall at approximately 120 miles per hour." At press time, source confirmed Lorenz had sighed and opened the parachute after deciding "Please, please, please, I don't want to die, don't let me die, please!" was the best he was going to get.

Lesson name	Data
Hamburger Buns	Breathing a huge sigh of relief when they saw the two halves, a spokesperson for the U.S. populace announced Tuesday that the nation likes it when the hamburger bun is already cut. \"Oh thank God-that would have been exhausting,\" said 43-year-old Zachary Bernard, who spoke on behalf of all 335 million Americans, expressing gratitude that the pre-cut buns had allowed them to park themselves in front of the TV that much quicker. \"If it wasn't cut, we don't even know what we'd do. We'd have to turn around and get a butter knife, and by the time we were done, we'd probably be too tired to eat the burger. We'd just go to sleep right there in the kitchen.\" At press time, Bernard added that using a cut bun was also half the cost compared to using two buns to make a burger.
